Team Member	Student ID	Contributions
1.Md Sakib Hossaine	22201185	Handled all Coding ,development including WebSocket video streaming and client management. Implemented motor control logic (forward/backward/left/right/stop), PWM speed control, LED brightness, and pan/tilt servo positioning. Also implemented safety routines that stop motors and reset components upon client disconnect.
2.Md Tabiur Rahman	22201171	Focused on the environmental monitoring subsystem to detect gas leakage, monitor air quality, and measure temperature/humidity. Ensured real-time data display capability. Created the circuit diagram, embedded diagram, and Gantt chart for the project timeline.
3.Faiza Haque Shaily	22201183	Led the hardware section including component selection, circuit setup, and wiring. Integrated the motor driver, servo motors, and power supply using LM2596 converter. Performed all hardware testing, troubleshooting, and final system integration. Created the complete circuit diagram for the robot
4. Asif Rezwan	24101902	Conceived the core project idea and defined the mission features (360° camera, environmental monitoring, obstacle detection, IoT control). Identified the key problem of existing robots lacking both good video and sensors, and proposed the dual-brain solution. Created the embedded system diagram and reviewed existing literature for the project.
